Problem Statement

Students often struggle with accessing affordable academic books due to limited availability and high prices. To address this issue, our goal is to design a user interface for a Book Exchange Platform tailored for university students.

This UI aims to:

- Enable searching, uploading, buying, selling, and exchanging of academic books.
- Provide distinct profile options for both students and bookstores.
- Incorporate a clean, intuitive interface for smooth navigation and communication.
- Simulate real interactions like notifications, chat messages, book listings, and profile updates.

The design will focus on:

- Ease of use for tech-savvy and non-tech-savvy students.
- Visually organized layouts for book details, transactions, and profiles.
- User-friendly forms for login/signup, profile creation, and book uploads.
- A consistent and responsive design system that can be adapted into mobile or web formats.

This project is solely for user interface design, created as part of a UI design assignment.
